

Corporate QA Results Displayed

This is based on a true story.... time savings of
1-2 hours per day.

Omnivex Digital Signage software has an easy to use WYSIWIG (what you see is what you get) interface, you can easily create eye-catching displays in as little as five minutes. No special file formats, or converting of files. Designed with business use in mind, with a Windows XP format – watch the demo to see how easy it is.....

Case Study

The company – we will call it big Corp has updated from time to time consuming digital signage system to an Omnivex driven system.

The everyday time saving has been considerable and daily costs reduced significantly.

Before

Data was driven from the company database and entered into a Powerpoint presentation (30-40 minutes)

The powerpoint was sent to a different department who converted it to a more display friendly file format. (20-30 minutes).

The file was then sent to another for incorporation into the display and sent to the Player (30 minutes). Plus time spent exchanging files.

Total time daily – 2 hours

After

Data was drawn from Database and input directly to Excel spreadsheet that is linked to Omnivex Datapipe Server.
(5-10 minutes).

(this process could be fully automated, but the company is using the manual option for the time being)

Total time daily – 10 minutes

Total time savings 1 ¾ hours per day.

Imagine this cost saving in your company? Data can be automatically linked from various data sources & databases.

Live TV, RSS feeds, Images, video, transitions and more can be added to display on your screen.
